Comprehensive Wellness Program

The professionals at Dakota Hills Veterinary Clinic care about your pet's health and well-being. Yearly immunizations provide important protection for your pet against infectious diseases, but perhaps even more importantly, your companion's annual comprehensive physical assists in early detection of problems or illnesses. As your pet moves through the natural aging process, we can differentiate between the "normals" and "abnormals" and identify the initial signs of disease. Some of the more common treatable diseases that can be detected include kidney disease, heart disease, hormonal imbalances, dental diseases, skin conditions, arthritis and joint diseases, and weight or nutritional problems.

Only a doctor's physical exam and diagnostic testing can identify these conditions at an early stage when cure or reversal is the most successful. Because we are committed to providing the very best care for your animal companion, we have designed these comprehensive care packages to help us detect and treat disease early. These packages would be most beneficial for the aging or senior pet, but younger animals with chronic conditions would benefit greatly as well. The more we know about your pet, the more we can support you in providing your pet with a lifetime of good health.
